

EU Navigate

Developing NavCare-EU:
a cost-effective patient navigation intervention that will support older people with cancer and their families in navigating the complexity of the healthcare system in Europe for them to have timely and equitable access to health and social care services.

RESEARCH OBJECTIVE

We aim to develop NavCare-EU and evaluate its effectiveness and cost-effectiveness to improving quality of life of older people with cancer and their families in different healthcare systems in Europe.

METHODOLOGY

NavCare-EU is based on the successfully-tested Nav-CARE program from Canada and will be evaluated in a pragmatic randomized controlled trial in six EU countries.

AMBITIONS

NavCare-EU improves the quality of life and well-being of older people with cancer and their families, fosters empowerment, and promotes timely and equitable access to health and social care services.

EU NAVIGATE PROJECT (2022-2027)

INTERDISCIPLINARY INTERCONTINENTAL

Most people who have cancer are older people, affecting millions of Europeans each year. Yet, they remain to lack access to health and social care services, and so far, there is limited high-quality evidence on patient navigation interventions that could help them navigate the complex healthcare systems and equitably access care in Europe.
